

Claims

1. Mounting assembly for releasably mounting a housing of an electronic device (1) on a surface such as a wall or a piece of furniture, comprising receiving means (14 - 17) to be arranged on said surface, and engaging means (2) to be arranged on the housing for engaging with said receiving means, wherein said receiving means cooperate with at least one ventilation recess (4) of the housing to lock said housing on the mounting assembly.

2. Mounting assembly according to claim 1, **characterised in that** said engaging means have a first part for being moveably received in the receiving means, wherein said receiving means have a moveable part which, in a first position, cooperates with a ventilation recess of the engaging means to lock said engaging means into said receiving means, and which, in a second position, allows removal of the engaging means.

3. Mounting assembly according to claim 2, **characterised in that** the first part of the engaging means is formed by a sliding piece.

4. Mounting assembly according to claim 3, **characterised in that** the receiving means include guide means for slidably supporting said sliding piece.

25 5. Mounting assembly according to claim 4, **characterised in that** said guide means are formed by at least one U-shaped groove adjusted to the size of the sliding piece.

6. Mounting assembly according to any of the claims 2 to 5, **characterised in that** said moveable part of the receiving 30 means consists of a resilient bracket or lever, adapted to protrude from under the housing in locked position so as to

allow a user to unlock said engaging means by pushing the protruding part.

7. Mounting assembly according to any of the preceding claims, **characterised in that** said assembly further comprises  
5 at least one fixing means for fixing the engaging means on the housing, said at least one fixing means having a size adapted to the size of a ventilation hole of the housing.

8. Mounting assembly according to claim 7, wherein the fixing means is a screw.

10

9. Electronic device, such as a modem, **characterised in that** it comprises a plurality of ventilation holes on a side of the housing, at least one of said ventilation holes being  
15 adapted to cooperate with engaging means of a mounting assembly, at least part of which is adapted to be fixed on a surface, for locking said housing on said mounting means.

10. Mounting assembly for an electronic device according to claim 9, **characterised in that** said engaging means  
20 comprise a moveable part provided with at least one protrusion to be received in said at least one ventilation hole of the housing.

11. Method for fabricating a mounting assembly according to any of the claims 1-8, **characterised in that** the engaging  
25 means and the receiving means are fabricated by moulding using a single mould.
